

How to use Diameter Ruler...

When using braided sleeving, especially the non-expandable varieties, it's important to have an accurate measurement of the application's diameter.

Use this handy diameter ruler to directly read the diameter of wire and cable bundles without any formulas or calculations.

Directions

Print this sheet on any printer, making sure your printer is set to print at 100% size to ensure the accuracy of your measurement.

Then, just cut out the ruler and wrap it around your bundle. The number that intersects the zero mark is the approximate diameter of the bundle.

This ruler will accurately calculate wire and cable bundle diameters up to 3" in 1/16" increments.
